

# Screen findings: Aynzenix client portal and the ADB Forex terminal

Recorded on 10 October 2026 from a signed-in demo session on trade.aynzenix.com. No order, deposit, or withdrawal was submitted. Balances, bank details, and credentials are omitted. This note records what was on screen, and where the ADB Forex terminal behaves differently.

---

## Findings from the Aynzenix screens

1. **Desktop navigation is icon-only.** The left rail shows icons without text labels. Dashboard, Chart, Funds, Copy Trading, and IB Room are not named in the default state. A first visit depends on recognizing the icon.
2. **The first screen after login is a portfolio overview.** The page is a grid of metric cards, a live-balance total, and shortcuts for Wallets, Deposit, Withdrawal, and Internal Transfer. The chart opens on a separate page.
3. **The chart ticket and the chart footer disagree on margin.** The order ticket showed the text “Margin unavailable”. The footer on the same page showed a margin level of 0% and free margin equal to the account balance.
4. **Equity and balance on the account card do not match.** The active trading-account header showed equity at 0. The balance on the same card was a much larger figure.
5. **Buy and Sell appear twice on the chart page.** One pair sits in the chart header with the lot size. The same controls sit again inside the symbol list, with Market and Limit underneath.
6. **Open Trades is a separate empty page.** With no rows, the page shows “No open trades found”, filters, and a download action. It does not offer a way through to the chart. Open positions are already listed on the chart page.
7. **Wallets repeats one total.** The page title, the Main Wallet card, and the active-account line all show the same live total. The first screen does not list movements. A note on the page says demo accounts are excluded from that total.
8. **Copy Trading did not render in this session.** The item is in the menu. The content area stayed empty; only the icon rail was visible.
9. **Mobile dashboard labels are clipped.** On a phone-width screen, card titles truncate (TOTAL TRAD..., OPEN TRAD...). The figures remain visible.
10. **The chart ticket exposes Market and Limit.** Lot size, Buy, Sell, stop loss, and take profit are on the ticket. Stop, Stop Limit, time-in-force choices, trailing stop, hedging, Close By, and Reverse were not on this ticket.
11. **The login headline is repeated.** The marketing panel and the form both read “Welcome to Aynzenix”.
12. **Download App is in the menu without store links.** The navigation item is present. The Android and iOS links for this site are empty.
13. **Some chart requests returned an error.** Candles still drew. The page showed a chart and, in the console, failed requests during the same load.

---

## Where the ADB Forex terminal differs

These are present in the current ADB Forex build. They are the points that do not match the findings above.

1. **The trade screen is one workspace.** Market Watch, the chart, the order ticket, and the position toolbox sit on the same screen.
2. **Primary navigation uses words.** Trade, Markets, Portfolio, Orders, and History are labeled in the top bar.
3. **The ticket lists four order types.** Market, Limit, Stop, and Stop Limit. Time in force on the ticket: GTC, DAY, IOC, FOK, GTD, RETURN, and BOC.
4. **Protection is entered on the ticket.** Stop loss and take profit accept a price or a pip distance. A trailing distance can be set on a position.
5. **Position handling covers two modes.** Netting and Hedging. From a position the user can close, partially close, Close By, Reverse, and edit stop loss or take profit.
6. **Margin stays on the trade workspace.** Equity, margin, and free margin sit on the terminal with the ticket and the positions. There is no second page whose only job is an empty open-trades list.
7. **The chart has its own layout controls.** Candles, bars, line, and area; layouts from a single chart through 3×3; fullscreen; drawings; RSI and MACD.
8. **Forex cash is a separate ledger.** Demo and live forex accounts post to forex books, not to the crypto spot wallet.
